Diuretics Compounds

Diuretics are among the most commonly prescribed drugs and, although effective, they are often used to treat patients at substantial risk for complications, making it especially important to understand and appreciate their pharmacokinetics and pharmacodynamics. Clearsynth is pleased to offer new potential diuretics compounds which will help in your research. These includes API, Stable isotopes and Impurities and Metabolites of Furosemide, Torsemide, Spironolactone, Bumetanide and Metolazone. Apart from these compounds we have more diuretics compounds and adding more new compounds everyday. Please contact us for more details.
